Earlier action matters only when $\delta < \tau_r \le \delta + L$
margin M
time (s)
lead time L
slack $\delta = t_f - t_0$
recovery τ_r (in time)
recovery τ_r (too late)
margin $M(t)$
reactive trigger ($M = 0$)
predictive trigger ($\widehat{T}_A \le T_h$)
latest safe trigger $t_{\text{pnr}} = t_f - \tau_r$
physical deadline t_f
